SEI Data Cloud.

Access near real-time data and analytics with the power to automate and orchestrate.

What is data cloud?

Data cloud is an integrated data management system that unifies all data sources, storage options, and infrastructure. With an on-demand model, organizations can easily scale and reduce costs. Data cloud frees you from hosting digital applications on your own servers.

Data is intelligence

SEI Data Cloud (SDC) seeks to meet the industry demand for more advanced data integration. Financial and technology organizations increasingly need database-like access to power analytics, application development, consumption of large amounts of data, and advanced reporting.

Advantages of data cloud

Unified solution for diverse use cases

Resolve multiple challenges within a single integrated environment.

Single source of truth

Create a unified data layer across business units with flexible storage.

Dynamic data access

Access live data with comprehensive history and granularity.

User-centric focus

Enable users to concentrate on their core business and customers, not complex technology.

Versatile integration capabilities

Integrate seamlessly via APIs, files, data marketplace, and third parties.

Innovative customer experience

Deliver a fully managed, best-in-class customer experience.

Scalability on demand

Scale easily for complex calculations and evolving business needs.

Agile and adaptable

Stay ahead with agility and adapt to changing business landscapes.

Fully managed platform

Provide robust governance, encryption, and hassle-free management.
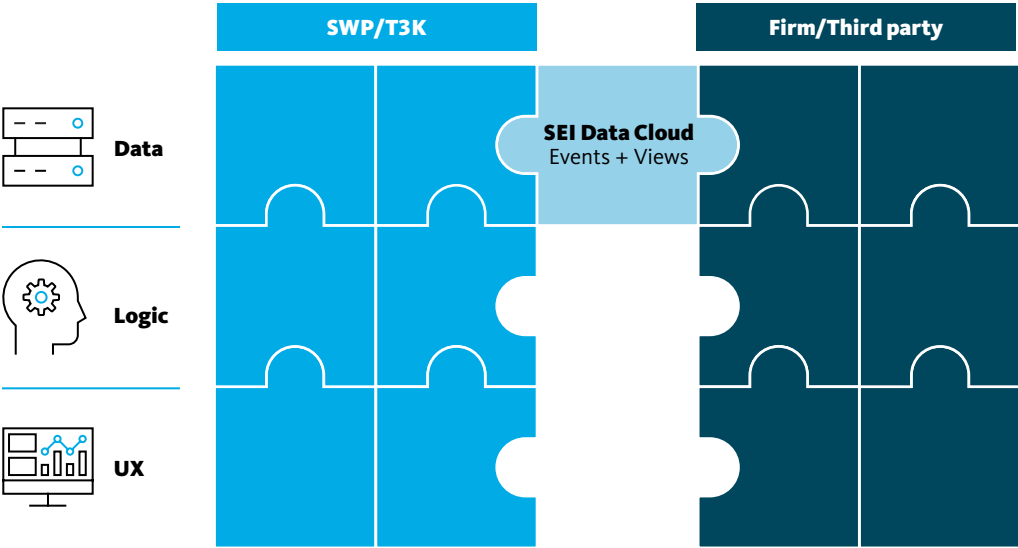

Continuous innovation

Foster innovation, enhancing features to meet evolving industry needs.

Capabilities

SEI Data Cloud users have access to modern delivery capabilities, including:

- On-demand access to near real-time data
- Business event-based alerts and notifications
- Comprehensive SEI Wealth Platform℠ (SWP) and TRUST 3000® (T3K) data models with the ability to aggregate non-SWP and T3K data

- Inventory of standard data views for ease of consumption
- Advanced data analytics and reporting
- On-demand scalability
- Data sharing with firm instances of Snowflake
- Snowflake-powered technology
